

AllSeen Alliance  
Certification and Compliance Work Group (under TSC) Minutes  
May 21, 2014  
5:00pm PST  
via WebEx

Presentation slides at:

[https://wiki.allseenalliance.org/compliance/overview#meeting\\_minutes\\_and\\_presentations](https://wiki.allseenalliance.org/compliance/overview#meeting_minutes_and_presentations)

**Participants:** Brett Preston (LF), Joe Speed (LF), Jun Zhang (Haier), Lisa Lammens (QCE), Telis (QCE), Tolly Smith (Silicon Image)

### **Joe reviewed the Antitrust Compliance Notice and the Bylaws**

Joe presented goals for the day's discussion, which included:

- a) Discuss moving changes to Phase 2
- b) Extend our "homework" ask to all members
- c) Review Jun's clarifications re #3 spec
- b) Feedback on Homework

### **Discuss moving changes to Phase 2**

Joe acknowledged how Jun/Haier have been doing a lot of work around identifying additional test cases, and that test cases have been accepted by this WG. Jun and Haier are updating the test case documents to include the additions. However, Haier does not have Java/Android developers to spare at this time to work on updating the self-test validation tool, and neither does Qualcomm. Jun and Haier have agreed to defer these additional cases to Phase 2, given shortage of resources combined with importance of getting Phase 1 in motion. Joe made suggestion to defer additional test cases to Phase 2.

Jun confirmed they currently do not have additional resources to update the validation tool.

Lisa agreed it sounds like a good plan. She noted that while it may be difficult to write the test cases, if people can give an example of how they would test against, someone else can help re-write if it's not clear.

Telis agreed and also made note that template has been provided for writing test cases.

Jun asked for confirmation that when they make updates to the test case document, they are to use the original documentation test case specifications, with track changes turned on.

Telis confirmed that correct approach is to take current documentation, turning on change tracking, and adding additional cases to those test plans.

Tolly agreed with the plan.

The end outcome is that we will defer additional cases to Phase 2.

### **Extend our “homework” ask to all members**

Joe asked if anyone on the call has had an opportunity to do the homework. None have had a chance yet.

Joe made the suggestion that we roll out the homework to all Alliance members, to assist in identifying any feedback/issues... so we are able to address before Phase 1 is formally rolled out.

Tolly agreed it makes sense.

Joe polled those on the call to gather where the feedback/results should be sent. Lisa/Jun agreed feedback should go to [allseen-cc@lists.allseenalliance.org](mailto:allseen-cc@lists.allseenalliance.org)

Tellis noted that we have not had the time to create a forum on compliance & certification.

It was ultimately decided that:

1. For technical support, submit to Ask (<https://ask.allseenalliance.org/questions/>)
2. For feedback/results, submit to [allseen-cc@lists.allseenalliance.org](mailto:allseen-cc@lists.allseenalliance.org)

Brett and Joe will work to get an email out to all members (across mailing lists) to extend out the homework assignment

### **Review Jun’s clarifications re #3 spec**

Joe noted that in review of some of Jun’s test case adds, Lisa/Telis noticed some were just clarifications.

Under Notification Service Test Case Spec, under column Type, several were Questions.

In reference to 3.1 (Step 5), where it asks the tester to select the notification text, Telis clarified that one of the messages (test 1, 2 or 3) will be displayed on the DUT. On the device, there will be a question around what message did you see on

the DUT. The consumer must select one of these messages that are displayed. Note that if you select the wrong message, you would fail.

It was concluded by Joe, and agreed to by Telis, that the right way to review these test plans, and to comment/edit on them, is by trying the tool.

In reference to another question, in step 6/when was the referred session established, Telis noted that we didn't put down in the test specs all the detailed steps.

Lisa noted that the data is shown in the log file.

Telis will follow-up with Aaron to make sure questions have been answered

Jun / Haier will do the self test

Joe provided RFP update that it's still under development

Joe closed the call
