Security 2.0 Status/Technical Meeting 5/11/15

- HLD
  - 2.3.6
    - **Required to close on HLD for 15.08**
    - Reviewed recommended on-boarding a claiming flow and agreed that the current description is not blocking acceptance of the HLD.
  - Identity delegation descriptions (various sections)
    - Gerrit raised concern that location of chaining of identity certificates is not specifically described in the HLD. Phil indicated it is along with supporting manifests only at the leaf certificate. Gerrit to review latest HLD to verify it is adequately described. Gerrit to follow-up via e-mail.
  - Pending Gerrit's verification of the prior topic or updates based on his feedback (chaining of identity certs being adequately documented) the group agreed there are no issues blocking acceptance of the HLD!!
- IRB
  - API review is healthy with remaining issues being cosmetic.
    - Need "+1" from a few more IRB commenters. Rob to ping Dave Thaler for his +1
    - Expect Dominque to present to TSC next week with recommended acceptance.
  - Security Manager to Security Manager APIs.
    - Qeo will provide security manager to security manager discovery API for discussion by Wed (May 20)
    - Qeo will provide security manager to security manager exchange of data one week later (Wed, May 27)
    - APIs will be submitted to IRB as soon as Security 2 team reaches consensus. Gerrit will work closely with Dominique to assure the APIs align with IRB expectations prior to submission in attempt to address potential issues earlier and expedite review.
  - Phil Nguyen will submit new API methods to existing X API next week.
- Remaining Tasks
  - JIRA filter set up to track open tasks
    - https://jira.allseenalliance.org/issues/?filter=11027
    - Gerrit with speak with Peter regarding key Qeo tasks.
    - This is the main communication method for identifying remaining work and completion dates
  - All code must be feature tested and merged with master before July 24
